

Hydromx Chosen as Finalist for 2022 ICIS Innovation Award

Hydromx is proud to announce that it has been recognized as a finalist for a 2022 Independent Commodity Intelligence Services (ICIS) Innovation Award.

These awards are given to companies that display creativity, sustainability, and vision with their advancements in the chemicals industry. The revolutionary Hydromx heat transfer nanofluid was among five technologies recognized in the Best Product Innovation from a Small-to-Medium Enterprise category.

Others selected as ICIS 2022 award winners and finalists represent some of the world's most established, innovative, and well-known chemical engineering firms.

“We are honored to be recognized by ICIS and to be in the company of the other extraordinary winners and finalists,” says Hydromx CEO Berkin Arıkan. “These awards are highly respected in the chemical industry and it gives us immense pride that ICIS has named Hydromx as a leader in sustainability.”

This is just the latest industry accolade for Hydromx's energy-saving technology. Earlier this year, Hydromx was selected by the UK Green Building Council as a product that can “radically improve the sustainability of the built environment.” It was also chosen by the New York City mayor's office of climate and sustainability as an official service provider in its program to cut building emissions.
