

Energy Reduction: 24%

Administered by: Save Energy Jaya PT

Hospitality - Hotel

Save Energy Jaya PT installed a COOLNOMIX unit on a walk-in cooler at a JW Marriott hotel in Surabaya, Indonesia. Baseline energy readings were taken for seven days. COOLNOMIX was then engaged for seven days and energy performance was compared.

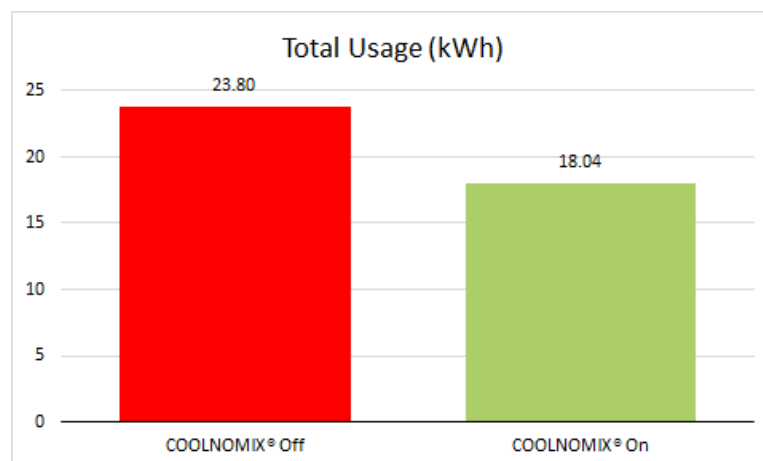

Installation	Baseline	COOLNOMIX®	Energy Reduction	
Refrigeration	23.8 kWh/day	18.0 kWh/day	5.8 kWh/day	24%

Conclusion

The walk-in cooling system was more efficient and kept temperature more consistent with COOLNOMIX. The 24% savings was achieved on a system that runs 24/7/365. If extrapolated to a year, kWh reductions would be greater than 2,000 kWh with savings over \$400.
